

2. Common Elements Between Two Arrays

Aim: To find the common elements between two arrays and analyze its time complexity.

Algorithm

1. Read the first array.
2. Read the second array.
3. Compare every element of the first array with elements of the second array.
4. If an element is present in both arrays, add it to the result.
5. Print the common elements.

Python Program

```
array1 = list(map(int, input("Enter first array: ").split()))
array2 = list(map(int, input("Enter second array: ").split()))
common = []
for x in array1:
    if x in array2 and x not in common:
        common.append(x)
print("Common Elements:", common)
```

Input

Enter first array: 1 2 3 4 5

Enter second array: 3 4 5 6 7

Output

```
IDLE Shell 3.14.0
File Edit Shell Debug Options Window Help
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct 7 2025, 10:15:03) [MSC v.1944 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>>
===== RESTART: C:/Users/Sireesha/OneDrive/Documents/DAA EX-2.py =====
Enter first array: 1 2 3 4 5
Enter second array: 3 4 5 6 7
Common Elements: [3, 4, 5]
>>>
```

Result

Thus, the Python program to find the common elements between two arrays was successfully executed, and its time and space complexities were analyzed.
